APPLICATION

For bare root trees, seedling flats, transplants, etc. Mix **1 pound (454 grams/16 oz) of RhizoGenesis™** with up to 20 gallons of water, as needed to treat 300-600 trees, or plants to cover one acre. Dip roots into solution and plant. For optimum results, let plant roots soak in solution overnight before planting. Any remaining solution may be used as a side dress after planting or poured directly onto the soil.

**For Best Results:**  
Add 12.5 oz. of a Pepzyme™ product for every 1 pound (454 grams/16 oz) of RhizoGenesis™ applied.

For maximum benefit of RhizoGenesis™, it is important that the Mycorrhizae contact the root or are in the root zone of the plant. If material is going to be surface sprayed, BioGenesis I NPT™ is the best option.

Although the microbes in our formulas are quite hardy and robust, certain chemicals can cause high mortality rates, therefore, for maximum benefit, it is important to clean your spray equipment before use, do not mix the beneficial microbe packages with chemicals, and recognize that re-inoculation is often necessary after many chemical sprays.
